

ABSTRACT:**"IMPROVEMENTS IN OR RELATING TO A SAFETY"**

A safety arrangement in a motor vehicle includes a sensor (10) and a component (17) of the suspension of the vehicle of adjustable length between a front wheel (16) and a fixed part (14) of the vehicle. The component of adjustable length (17) is associated with a chamber (20) to be filled with fluid, there being a fluid outlet (26) which includes a pilot operated diaphragm valve (36).
